

Wastewater Treatment Plants: Responding to Disasters

If you must act to respond to damage from a hurricane, flood, tornado, fire or other disaster, this information will help you understand relevant environmental rules and decide on a reasonable course of action to follow. If you have any questions, please contact your TCEQ regional office.

Find contact information for the regional office that serves you online at www.tceq.texas.gov/goto/region.

If an unauthorized discharge to state waters occurs due solely to flooding associated with a disaster event; will I be in violation of my permit?

According to Texas Water Code, you will not be in violation of your permit if you can demonstrate that an event was caused solely by an act of God or other catastrophe. If your facility causes unauthorized discharges due to flooding from a hurricane or other disaster or discharges necessary to release accumulated water in storage tanks, containers, or vessels as a result of a disaster you must:

- As soon as feasible, review the conditions at the facility.
- Take actions to minimize and eliminate the potential danger to human health and safety and the environment.
- To the extent feasible, limit discharges to not exceed effluent limitations.

If I have an accidental discharge or spill as a result of a disaster event, do I need to report it to the TCEQ within 24 hours?

Submit the notification as soon as is it is safe and feasible after discovery. The TCEQ will likely grant enforcement discretion of the 24 hour notice requirement in the event of a hurricane or other major natural disaster. Permittees should keep records of the following:

- a description of the noncompliance
- the known or potential danger to human health and the environment
- the period of noncompliance

- if the noncompliance has not been corrected, the time it is expected to continue
- the steps taken and planned to be taken to minimize the discharge and comply with the regulations.

Am I required to continue to comply with the effluent sampling requirements under my water quality permits following a disaster?

If meeting permit effluent sampling requirements would pose a threat to human health or safety, the permittee may interrupt any required sampling. You will likely be granted enforcement discretion of sampling requirements in the event of a hurricane or other major natural disaster. You should reinstate sampling as soon as it is safe and feasible to do so.

If my wastewater treatment facility suffers damage from a hurricane, tornado, flood or other disaster do I need to contact the TCEQ?

Report minor damage as soon as feasible after a disaster. Notify your local TCEQ office immediately if the wastewater system sustains major damage. Contact your local TCEQ office if assistance is needed.

If my facility is damaged or destroyed as a result of a disaster; do I need a permit amendment or an authorization to construct?

You don't need a permit amendment or authorization to construct if you must replace an existing damaged unit, or the entire plant to protect human health and the environment, as long as the repair or replacement is in accordance with previous TCEQ-approved design specifications.

Within 30 days of initiating such repairs or replacement, the owner or operator must notify in writing the TCEQ regional office serving the facility's county. You must also notify the TCEQ Water Quality Division in writing at:

Water Quality Division, MC-148
Texas Commission on Environmental Quality
P.O. Box 13087
Austin, TX 78711-3087

All notifications should describe the location and nature of the work and include the name, address, and telephone number of the permittee representative.
